

avast! SecureLine VPN

Secures all communications, anonymizes web browsing, and opens access to more web content. Even on 'open Wi-Fi' at your favorite coffee shop or 'public hotspot' at an airport, your communications will be secured on an otherwise unsecured network – your emails, account logins, instant messages, VOIP calls, and business/customer information will be protected from possible theft by hackers. Our SecureLine VPN resolves this threat by encrypting all your communications and anonymizing your web browsing. And if you go on business travel, for example, it enables access to geo-restricted web content.

KEY FEATURES – AVAST! SECURELINE VPN

ENCRYPTS YOUR CONNECTION ON UNSECURED/PUBLIC WIFI

Our private encryption 'tunnel' prevents hackers from stealing your communications and personal credentials even on public/open Wi-Fi 'hotspot' networks – securing the privacy of, for example, your accounting systems, company network folders, or even SAP or Salesforce accounts. Your encrypted communications can never be observed by unauthorized people observing your network activity.

PROVIDES PRIVATE, ANONYMOUS WEB BROWSING

If you travel, you can now access your preferred news, media, and other web content that may be otherwise restricted in the countries in which you are traveling. Set your internet connection to look like it originates from a different location – to unblock and anonymize your access to geo-restricted web content.

OFFERS YOU SEVERAL LOCATIONS TO CHOOSE FROM

Use our servers located in multiple countries (e.g. UK, USA, etc.) to access more web content from your PC, as your shown geo-IP address will be different from your actual one.

HOW DOES A VPN WORK?

avast! SecureLine is a VPN client that protects you from data theft, even on public/open 'hotspot' Wi-Fi networks, by using a virtual encryption 'tunnel' to secure all of your communications. Once secured, your data exchanges are impossible for any intruder to spy on. As well, it enables utilizing your choice of server locations on various continents.

AVAILABILITY

avast! SecureLine VPN is available as an add-on to our consumer product line as well as a standalone product.

For full product details, please visit: www.avast.com

SYSTEM REQUIREMENTS:

Pentium 3 Processor, 128 MB RAM
